

PeopleSoft Portal for Higher Education

From Website to Virtual Campus

Today's typical prospective student first assesses your institution through your Web site. What do they see? What can they accomplish there? What happens when alumni log in? Do those visiting your site access static informational postings, or do they enter a virtual community where they can interact with your institution?

Your Web site is the vehicle for showcasing your institution's mission, culture, and values. But it's more than that—for anyone accessing your site, it can be just as tangible and real as if they were stepping into a building. Are you using this power to its full potential and advantage?

You can, with the PeopleSoft Portal for Higher Education. With it, your Web site becomes a strategic asset for your institution. The PeopleSoft Portal for Higher Education allows you to leverage the Internet—raising service levels to all your constituents—students, faculty, staff, and alumni. Its advanced, role-based Internet technology helps you broaden the reach of your institution, communicate more effectively, and cultivate relationships with all your constituents.

An eBusiness Gateway to Your Campus

The PeopleSoft Portal for Higher Education helps you make the most of your Web site, turning it into a virtual workplace for your entire community of users.

A Single Point of Access

The PeopleSoft Portal for Higher Education is a central, role-based online access point into transactional systems, analytical data, merchants, third party content, and email. It provides a framework for you to create a virtual campus tailored to the individual requirements of all your constituents—students, faculty, staff, and alumni. With it, you can project your school's personality—the mission and values unique to your institution—and bring content together in a way that is meaningful to each of your users.

No Advertising Necessary

The content of your portal is determined entirely by you. There are no advertising or other subject matter requirements with the PeopleSoft Portal

“The PeopleSoft Portal for Higher Education is unique. It allows us to organize all the different Internet content in a meaningful way for our users; it projects the real culture and mission of our University.”

Carol Gamble, Director of Information Technology, Claremont Graduate University

for Higher Education. It will, however, support advertising should you choose to include it in your institution's Web site.

Designed for an Audience of One

The PeopleSoft Portal for Higher Education is designed specifically for the everyday Internet user. It gives you the ability to gear your Web site toward an individual's role or roles in your organization. When a user logs in, it presents content and navigation specific to the person's role.

For example, with just a few clicks, students can scan campus news and announcements, check grades, and verify financial aid. A professor logging in will find benefits information, travel, eMerchants, and classroom analytical data—information that is not available to students or alumni.

Your institution doesn't have to maintain multiple security profiles for the various systems accessed—the portal identifies the roles and rela-

tionships within your institution and automatically presents different perspectives.

To Better Serve Your Constituents

Your constituents have diverse and complex requirements. And it's your job to provide them with exceptional service. With the PeopleSoft Portal for Higher Education, you can use the Internet to deliver the information and tools they need to do their jobs most effectively.

When you provide appropriate users with access to PeopleSoft enterprise systems, you can streamline business processes throughout your organization to get things done more efficiently.

By incorporating campus news and other content from external sources, your Internet site becomes a virtual information center tailored

Financial Aid History

Personalized financial aid history and other financial information is provided at a detailed level by term.

Term	Financial Aid	Merit Aid	Scholarship	Grants	Loans	Total
2008 Fall	10,000	10,000	10,000	10,000	10,000	50,000
2009 Spring	10,000	10,000	10,000	10,000	10,000	50,000
2009 Fall	10,000	10,000	10,000	10,000	10,000	50,000
2010 Spring	10,000	10,000	10,000	10,000	10,000	50,000

to the needs of staff, students, fundraisers, alumni, and faculty. They can stay in touch, and your institution can provide improved levels of service to all constituents. Using your Web site, you can develop and nurture lifelong relationships.

Customized Access for Your Role

The PeopleSoft Portal for Higher Education delivers seven predefined roles to tailor your Web site for students, faculty, staff, and alumni. These roles provide customized access to specific information and tasks required by the individual, but your institution has complete control over determining what you want to expose on the Internet. To protect privacy and control security, you further define access and permissions.

A Logical Integrated Framework

The Portal provides a standard, personalized construct for users to navigate the many different systems and content they access.

An Inside Look

Briefly, here are the key components and functionality that can be included in the PeopleSoft Portal for Higher Education.

The Most Progressive Internet Technology

PeopleSoft Portal for Higher Education

1 Personalized

Everything users can see or do is related to who they are and what their role is. Users can navigate easily among transactions.

2 Role-Based Transactions

Within a presentation, your institution determines which transactions are relevant and can further refine access by role. A student's view of Academics is not the same as an instructor's view of Academics. So individuals will have just the right access to accomplish their goals based on whichever role or roles—student, applicant, alumnus, recruiter, instructor, academic advisor, friend, employee, customer, vendor, or guest—is relevant to them.

3 eMerchants

Your institution can link in your favorite merchants—whether a local favorite or an integrated merchant through PeopleSoft.

4 Configurable Presentations

Organize portal content any way you like—determining which transactions to group together, what existing Web content is relevant, and which merchants provide value. The portal becomes a vehicle for you to organize disparate content into a cohesive presentation while defining which roles have access to each presentation.

5 Institutional Content and Notices

You can bring together everything you think a person would or should want to know, incorporating all the Internet diversity your organization has developed into a cohesive targeted presentation.

6 Integrate Pre-existing Institutional Functionality

The portal framework enables your institution to trigger your favorite Web applications, providing fingertip access to all your best systems, including search engines.

With the PeopleSoft Portal for Higher Education, you have the most advanced Internet technology and functionality available. PeopleSoft applications for eBusiness are Internet-ready with scalable transaction and analytic processing capabilities, open integration, and 100 percent Internet browser-based deployment.

PeopleTools and the Internet

There is no need for additional environments to support the Internet because the foundation for all PeopleSoft applications is PeopleTools—our toolset and development environment. Packaged with our solutions, PeopleTools enables the rapid development, deployment, and cost-effective management of PeopleSoft eBusiness applications—providing the business rules and metadata for rapid collaboration on the Internet.

With the PeopleTools Internet architecture, PeopleSoft applications can be deployed from a server-centric development platform over the Internet and accessed through a browser—greatly reducing the cost of deployment, expanding your user base, and connecting your extended enterprise. You now need only a browser to access the power of your applications. You can connect all your students. All your faculty and staff. All your alumni.

PeopleTools operates on a range of leading hardware and database platforms, giving you immediate choices throughout the life cycle of your system.

Open Integration Framework

PeopleTools offers an open integration platform to connect your enterprise to nearly anyone or anything—legacy systems, third-party solutions, or trading partners' transactional functionality.

Internet Solutions for Higher Education

In addition to the PeopleSoft Portal for Higher Education, we have other Internet solutions for higher education that help you increase faculty and administrative productivity. These solutions help you maximize resources and manage operations more efficiently over the Internet.

PeopleSoft Student Administration

PeopleSoft Student Administration is a comprehensive suite of Internet-based learning management solutions. It provides the fundamental tools to not only support your day-to-day operations, but more importantly, to help you develop and cultivate lifelong relationships with all your constituents. Advanced Internet functionality provides customized, role-based access to students, faculty, staff, and alumni. PeopleSoft Student Administration supports the entire student life cycle—from recruitment to fund raising.

PeopleSoft Grants

Created in collaboration with several public and private research universities, PeopleSoft Grants enables you to manage sponsored research projects throughout their entire life cycle. With PeopleSoft Grants, you can develop proposals faster and more efficiently, then move easily to the award stage, where you can track and monitor your projects more efficiently.

PeopleSoft Grants enhances productivity at every stage of the process, helping you respond quickly to your sponsors' requirements. It enables you to maximize resources by automating tasks and streamlining operations. Via the Internet, you

can enter proposal information and track the status of proposals. Advanced reporting capabilities give you the ability to explore and analyze proposal and award data.

Enterprise Performance Management

PeopleSoft Enterprise Performance Management enables you to analyze transactional data from PeopleSoft enterprise applications—along with other internal and external data sources—to help maximize organizational efficiency, improve service to students, and make decisions about the future of your organization.

By tracking both financial and operational measures, Enterprise Performance Management provides a more balanced measure of real performance. With it, you can improve operational control by targeting the programs, departments, or processes that are most inefficient. You can also identify the functions that are most effective and capitalize on these successes by applying them to other areas of your organization.

PeopleSoft Enrollment Management Workbench

Designed for higher education, PeopleSoft Enrollment Management Workbench is an Internet-ready analysis and reporting tool that helps you evaluate the effectiveness of your recruitment efforts. It functions as an information subscription service, by automatically delivering role-specific reports to a predetermined group of users.

PeopleSoft Enrollment Management Workbench provides relevant information, such as which academic programs have the highest graduate rates, or which academic programs are the most popular with prospective and current students. Drill-down capabilities enable users to select detailed data, such as applicant age, for further analysis. You can then fine-tune your recruitment strategy by determining which activities lead to admissions, and ultimately to successful graduates.

PeopleSoft Financial Management

You plan projects, expand or change programs, budget for expenditures, and make thousands of important decisions based on your financial data. You need access to accurate information. PeopleSoft Financial Management applications fulfill complex accounting, management, and reporting requirements while simplifying and standardizing processes. The result—better control over budgets and more efficient use of your resources.

PeopleSoft Financial Management consists of PeopleSoft General Ledger, Receivables, Payables, Purchasing, Inventory, Budgets, Asset Management, Billing, Projects, and eProcurement.

PeopleSoft eProcurement

PeopleSoft eProcurement forges an automated tie to your suppliers. You create a comprehensive infrastructure for business-to-business buying over the Internet to streamline your vendor relationships and significantly lower costs throughout the enterprise. eProcurement provides realtime access to thousands of suppliers of business products and services with automated exchange of business transactions, such as purchase orders, tracking, and payment.

PeopleSoft Human Resources Management

PeopleSoft Human Resources Management applications enable you to respond to change—transforming your organization's human resource practices when you need to. This suite of flexible solutions helps you meet your unique requirements with features such as faculty event tracking, to help you manage faculty resources more effectively, and tenure tracking, to help you monitor academic positions. These applications also support hiring, payroll processing, and flexible benefits administration—including higher education business practices such as contract pay for faculty, and 403(b) tax deferred annuities. PeopleSoft Human Resources Management consists of PeopleSoft Human Resources, Benefits Administration, FSA Administration, Payroll, Payroll Interface, and Time and Labor.

PeopleSoft Advantage Customer Services

PeopleSoft: Committed to Your Success

PeopleSoft is committed to ensuring customer success and satisfaction by building quality products and delivering cost-effective, results-oriented service and support based on your unique organizational needs.

About PeopleSoft

Internet Architecture

With PeopleSoft 8, PeopleSoft will introduce a thin, HTML-based Internet client—including server-centric architecture that enables secure end user access to PeopleSoft applications from a Web browser executing on any supported client platform and operating system, over a low-bandwidth connection. Using PeopleSoft Internet Architecture as the foundation, customers will be able to provide a wide range of end-users with access to PeopleSoft applications over the Web, as well as more easily integrate their PeopleSoft applications with existing internal systems and external trading partner systems.

Advantage Customer Service

PeopleSoft Advantage Customer Service, our comprehensive global framework of services and support, delivers the widest range of value-added services in the industry. To ensure that your PeopleSoft system provides the greatest economic value to your organization, we offer a choice of service plans for your specific business requirements. You can select Advantage Customer Service or upgrade to Advantage Premium—both provide multi-channel access to essential services and support for you to maximize your investment.

Consulting

With 2,400 professionals worldwide, PeopleSoft Consulting delivers comprehensive implementation

services, helping PeopleSoft customers attain the highest value from eBusiness solutions. PeopleSoft Consulting teams also perform rapid and high quality implementations that meet critical client deadlines, collaborate closely with customer teams to speed knowledge transfers, and assist in integration with third party solutions.

Education Services

PeopleSoft Education Services' comprehensive learning programs prepare customers to quickly adapt to eBusiness technology. From readiness assessment to in-depth functional training to ongoing just-in-time learning support, Education Services can provide organizations with a learning solution to fit their needs. Specific content developed for the individual customer and a variety of delivery options, including traditional classroom training, Web-based distance learning, and Web-based performance support, offer the right training at just the right time.

eCenter

PeopleSoft eCenter offers customers the benefit of tightly integrated, award-winning applications without having to build and maintain a computing infrastructure. Customers can focus on building their businesses while applications are maintained at standard-setting data center services and supported by industry-leading customer service.

PeopleSoft is a worldwide leader in eBusiness applications and consulting. Our solutions include Customer Relationship Management, eCommerce and Supply Chain Management, Human Resource Management, Financial Management, Professional Services Automation, and Learning Solutions for a variety of industries. PeopleSoft supplies eBusiness Internet applications, consulting, and education for large and medium-size enterprises, as well as education and government enterprises of all sizes, that desire business solutions that are flexible, rapidly deployed, and provide a lower cost of ownership in today's Internet economy. With more than 4,000 customers and 7,000 employees, including 2,600 eBusiness consultants, and products installed in more than 90 countries, PeopleSoft helps its customers achieve the highest value from eBusiness solutions.
